

Project Review

Residential Hot Water

Domestic outdoor swimming pool, Kent.

The customer contacted us via our website, explaining that he currently heats his outdoor swimming pool, April-October, using a large domestic gas-fired boiler and the cost had risen so dramatically that he needed an alternative.

The house had limited flat roof space and so we needed to look at using some of the pitched roof as well.

We designed, supplied, and installed 6m² of LaZer2 solar thermal collectors, specifically for heating the pool (April-October) and generating c. 5MWh-th.

Our 2-man team led by lead LaZer2 installation engineer, Nick Martyn, and project managed by our Technical Director, Duncan Lee, installed and commissioned the system in just 3 days.
