

Project Review

Industrial Process

John Gosnell & Co. Ltd., East Sussex.

This long-established local business manufactures perfumes and toiletries at its production facility in Lewes, East Sussex.

They found us via our website, and we were approached by the building contractor working on their premises, to design a solar thermal system to feed hot water into their manufacturing process and reduce the cost of their gas-fired process.

We designed, supplied, and installed 15m² of LaZer2 solar thermal collectors, generating c. 11.25MWh-th.

Our 3-man team led by lead LaZer2 installation engineer, Nick Martyn, and project managed by our Technical Director, Duncan Lee, installed and commissioned the system in just c.3 weeks.
